

# Pamper your dog with PrimeVal

## Has your dog problems getting about?

With PrimeVal he will soon be jumping and running again!

Supple joints, a lovely, shining coat and to be bursting with energy, is what you can expect from your dog when you give him PrimeVal Gelatinaat®. The product contains calcium, magnesium and iron, but specifically it is the presence of amino acids (short peptide chains) that fight stiffness and painful movement. PrimeVal® makes sure that there is sufficient synovial fluid produced, whereby the cartilage has a chance to recover, the ligaments and tendons become stronger, and mobility increases.

## With PrimeVal your dog will be playful again

Due to advanced years, or congenital defects and/or putting the joints under stress (hard work) the fluid in the joints and the condition of the cartilage deteriorates. In laymen's terms we call that wear and tear of the joints, or 'jointy'. This expresses itself in stiffness, difficulty in getting going and pain caused by movement.

These conditions can cause suffering for the dog as well as the owner. The manufacture of joint fluid can be drastically improved with PrimeVal Gelatinaat®, which assists your dog to move more easily. The effect is often noticeable after only a few weeks.

## Composition per 7.5 gram (1 scoop):

High quality pharmaceutical collagen hydrolysate	4939 mg
Collagen type II	790 mcg
Elementary calcium (as calcium citrate)	363 mg
Elementary magnesium (as magnesium citrate)	98 mg
Elementary iron (as ferrous gluconate)	1.6 mg
Vanillin	2.5 mg

**PrimeVal Gelatinaat**  
For supple joints and strong bones

Approved feed supplement under the Veterinary Preparation and Animal Feed Act. PrimeVal® & Gelatinaat® are registered trademarks of PrimeVal BV Uitgeest, The Netherlands.

## A shiny coat

A good coat condition is not always a matter of fact. With PrimeVal Gelatinaat® the growth and thickness of the coat improves. The coat shines and feels supple to touch. PrimeVal Gelatinaat® is an excellent supplement for dogs that need regular trimming or for dogs who have coat problems.

## Building materials

The important building materials in PrimeVal Gelatinaat® are amino acids. These amino acids correspond with the amino acids in all components of the skeleton and the coat. The dog cannot produce some of these amino acids, which means they need to be taken in food. In addition to amino acids, PrimeVal Gelatinaat® is also rich in calcium, magnesium and iron.

## Workings

**In short:** PrimeVal Gelatinaat® makes sure that sufficient and nourishing synovial fluid is produced whereby the (damaged) cartilage has a chance to recover. The mobility of the dog's joints improves greatly and the complaints abate or disappear.

## For big and small dogs

PrimeVal Gelatinaat® is suitable for large and small dogs. Although the larger dogs are more prone to hereditary defects, smaller breeds can also have problems with mobility and their coat.

## PrimeVal Gelatinaat® is also for puppies

The skeleton of the pup develops quickly during pregnancy and the first couple of years.

It is important to the pup that he has access to the optimal ingredients for the delivering of the minerals and building blocks for his development as they are present in PrimeVal Puppy. Pups have different nutrition requirements than adult dogs. The product PrimeVal Puppy is therefore especially formulated without calcium.

## PrimeVal Gelatinaat Dosage:

Bodyweight	Daily dosage
Between 5 – 15 kg	½ a scoop
Between 15 -30 kg	1 scoop
Between 30 -40 kg	1 -2 scoops
From 40 kg	3 scoops

## PrimeVal Gelatinaat:

You can add PrimeVal Gelatinaat® simply to your dog's dry food or mixed dinner. Mix some water with PrimeVal Gelatinaat® as it should not be fed dry. PrimeVal Gelatinaat® is a feed supplement and can be used without any problems in conjunction with veterinary medication.

## What PrimeVal users say:

*"My Yorkshire terrier has trouble with his kneecap. Every day I give him a small scoop of PrimeVal Gelatinaat, and as a result he is so much better."*

*"For the last year and half my Great Dane, Chloe, has suffered from wear and tear in both her knees. After just three weeks on the PrimeVal there was a marked improvement, and now she runs after the ball again!"*

*"I am the owner of a Rottweiler who has been trained as a guard dog, but unfortunately has trouble with hip dysplasia. Your product works very well and I advise everyone who has the same problem with his dog to try PrimeVal. It is as if my dog has been given a second chance. I just can't begin to explain what that means to me."*

*"My older dog, a kelpie, has arthritis in his hindquarters. He is going so well on PrimeVal Gelatinaat."*
